AFFYNE LABS

BETTER MINDS. BETTER LIVES.

BRAND & TEAM OVERVIEW

Who we are, what we believe, and who is building it.

Part 1 — Brand

1. Our Name

Affyne Labs is built from two ideas: Affinity — human connection, trust, attachment and empathy — and Intelligence — the ability to perceive, understand, and recognize patterns in context.

> *Affyne = Affinity + Intelligence*

Labs reflects how we intend to build: through exploration, experimentation, research, and iteration. We are not defining the company by a single product — we want the freedom to explore multiple technologies as our understanding deepens.

2. What Affyne Labs Is

Affyne Labs is a HealthTech innovation company exploring the intersection of artificial intelligence, human understanding, and wellbeing. We experiment, research, and build technologies that help us understand people more deeply and enable better forms of support.

Our first application is mental health and emotional wellbeing — that is where we start, not where we stop.

3. Our Mission

> *To make technology understand people more deeply, and use that understanding to support human connection more meaningfully.*

Technology has become increasingly capable of processing information, but people are more than information — context, emotion, relationships, behaviour, and history all shape what someone communicates. Affyne Labs exists to account for these dimensions, responsibly.

4. Our Vision

> *To build Human Understanding Intelligence — technology capable of interpreting human communication, context, behaviour, and evolving states, in ways that enable more meaningful human experiences and support.*

Mental health is our first domain of application. It is not the limit of what we intend to explore.

5. What We're Building First

Our first product is designed to understand a person's communication across conversation, voice, emotion, intent, context, personal baseline, longitudinal patterns, and risk signals — and to use that understanding to provide personalized support, appropriate interventions, and human or professional escalation when required.

> *People communicate more than they say.*

Mental health is one of the clearest areas where there is a gap between what a person experiences and what they are able or willing to say out loud. Our product explores how technology can understand what lies behind a conversation — not to replace human care, but to make support more contextual, timely, and personal.

6. What We Believe

- People are more than the words they say.
- Understanding should come before intervention.

- Technology should augment human connection, not replace it.

7. Brand Personality

The identity should feel like serious technology with a human soul:

Human	**Intelligent**	**Calm**	**Trustworthy**
Warm	**Sophisticated**	**Curious**	**Empathetic**

8. Brand Architecture

Company / Brand	**AFFYNE LABS**
Core idea	**Affinity + Intelligence**
Current category	**Human Support Intelligence**
Long-term category	**Human Understanding Intelligence**
First application	**Mental Health & Emotional Wellbeing**
Long-term ambition	**Technology that understands people.**

9. The First Impression We Want

When someone sees the Affyne logo, the reaction should be:

> *"This feels intelligent, human, and trustworthy."*

Not "this is a mental-health app." The logo should create curiosity first; the brand should create meaning over time.

10. Visual Identity

The logo pairs an upward, connecting mark (the "A") with a grounded base (the "L") — motion meeting stability. Primary palette: deep navy for authority and trust, paired with a lighter, human blue.

Part 2 — Team

Affyne Labs is founder-led, with a small senior core team covering product, engineering, design, data, and clinical psychology, supported by an advisory layer with deep technical and clinical experience.

Leadership

NAME	ROLE	WHAT THEY OWN
K Yugavardhan	Founder & Product Lead	Product vision, strategy, roadmap, fundraising, and final product decisions.

Core Team

NAME	ROLE	WHAT THEY OWN
M Keerthi Vardhan	CTO / Backend & Platform Lead	Backend architecture, infrastructure, scalability, and technical standards.
B A Fareed Ahamad	Lead, Product Design & Security	UI/UX, design system, and application security.
B A Sofiya Jahan	Lead, Data & Evaluation	Data pipelines, experiment design, and model/product evaluation.
V Deviprasad Reddy	Machine Learning Lead	ML models, classifiers, training, and inference.
S Archana	Research Engineer — AI	LLM experimentation, conversational behaviour, and dialogue-policy research.
S Manasa	Research Engineer — Technology	Technical research, tooling, and prototyping.

Clinical Team

NAME	ROLE	WHAT THEY OWN
Roshanara	Clinical Research Lead (Psychology)	Psychological literature, evidence mapping, and therapeutic frameworks.
Nidhi	Clinical Research & Safety Lead (Psychology)	Risk taxonomy, safety evaluation, and escalation requirements.

Mentors & Advisors

NAME	ROLE	WHAT THEY OWN
Dr. T Vivekanandan	Faculty Advisor — Technology	Technical mentoring, architecture review, and feasibility assessment.
Dr. Sudha P	Faculty Advisor — Psychology	Clinical/psychological framework guidance and research supervision.
Dr. Hariharan	Faculty Advisor — Psychology & Strategic Clinical	Clinical guidance, institutional connections, and strategic introductions.

NAME	ROLE	WHAT THEY OWN
Mrs. Pooja	External Advisor — Technology (ISRO)	Technology guidance and industry/institutional perspective.
Mr. Kamal	External Reviewer	Independent technical and product review.
